HSE Recognition

Northwest Redwater Partnership would like to thank the above Chemco workers for taking the initiative of going above and beyond with their “Stop the Drop” program.

Jin Lane, Ronald McLellan and Robert Lock designed a frame and netting that is secured on the outside of modules at the base of light stanchions. This will mitigate the chance of bolts/nuts falling while the electricians install lighting on the outside of modules. They were recognized in front of their peers with iPod Shuffles during their safety meeting.

Great work by all and thanks again for going above and beyond.

**Stop the Drop
mitigation**
